SEMI POLYAXIAL 25D SCREW

The 25D screws has a specific head design offering a semi polyaxiality. While the polyaxial area eases rod insertion, the locked part helps to manage coronal and axial correction.

QUICK RELEASE REDUCER

The QR Reducer is a versatile instrument developed to address the challenges in the treatment of spinal disorders, especially in direct vertebral derotation maneuvers.

LOW PROFILE HEAD

The low profile head of the ROMEOR² implants is designed to enable atraumatic implantation and minimize anatomical interference.

DEFORMITY PLATFORM

Spineart offers a complete set of intuitive instruments and a complete line of implants including monoaxial, polyaxial, high top and semi-polyaxial screws, hooks, connectors, CrCo and titanium rods, all dedicated to the treatment of spinal deformities.
