SCARLET[®] AC-T

STERILE
IMPLANT

SECURED CAGE

The screws allow to stabilize the construct while securing the cage. They are also secured thanks to their incorporated locking concept.

ZERO PROFILE

The heads of the screws are completely integrated into the cage in order to lower the ossification risk of the adjacent levels and dysphagia.

SIMPLICITY OF USE

The SCARLET[®] system combines the functionality of an interbody device and the advantages of a cervical plate. The anatomic profile of the implant also facilitates its insertion and allows a perfect fit between the endplates.

TITANIUM

The titanium design of the cage offers a big graft window and consequently an optimized bone purchase.
